

Measuring Stairs with Digital Level

of Risers _____

Degrees _____

Overall Dim _____ in.

Notes :

1) Count the number of risers in your stairs.
 - Refer to figure to the left for location of risers which are signified by the letter **R**. The figure to the left is only for example purposes. Please fill out the number of risers for your stair situation in the top left corner.

2) Using a digital level, lay the level flat on the stair. While keeping pressure to ensure the level is straight, slide it down the stairs until the level hits the bottom run. Take the degrees measurement reading. While the level is still at the bottom of the stair hook your tape measure to the back side of the level and run the tape to the top of the stairs. This is your overall measurement.

Digital level is more accurate but if you do not have this tool please refer to the next page
